

I'll help you standardize this dataset. Here are the main standardization steps we should take:

1. Status column: Convert all variations to consistent values
 - 's' and 'f' should be 'for_sale'
 - 'sold' remains 'sold'
2. Price column: Remove '\$' and ',' to convert to numeric format
3. Bed column: Convert text numbers to numeric
 - 'two' -> 2
 - 'three' -> 3
 - 'four' -> 4
 - 'five' -> 5
4. Bath column: Same as bed column
5. State column: Use consistent state abbreviations
 - 'California' -> 'CA'
 - 'West VA' -> 'WV'
 - 'Massachusetts' -> 'MA'
 - etc.
6. House_size: Convert scientific notation to regular numbers
7. prev_sold_date: Convert to consistent date format (YYYY-MM-DD)

Would you like me to proceed with implementing these standardizations? I can provide the standardized dataset or focus on specific columns you're most interested in.
