I'll help you standardize this dataset. Here are the main standardization steps we should take:

1. For the 'status' column:

- Convert 's' and 'f' to 'sold' and 'for_sale' respectively

2. For the 'price' column:

- Remove '$' symbols
- Convert to numeric values

3. For the 'bed' and 'bath' columns:

- Convert text numbers ('two', 'three', etc.) to numeric values

4. For the 'state' column:

- Use consistent state naming (either full names or standard abbreviations)

5. For the 'prev_sold_date':

- Convert all dates to a consistent format (YYYY-MM-DD)

6. For the 'house_size':

- Convert scientific notation to regular numbers
- Ensure consistent units

Would you like me to proceed with implementing these standardizations? I can provide the code and the standardized dataset.
